Overview

CICD practices of continuous integration and continuous delivery helps DevOps teams ship higher quality software, faster, for improved software deployment.

Cost Benefits

1. We will be able to ship new features rapidly and with confidence. Thus end user will get those regularly and we all know, more features means more users.

2. We will be able to ship high quality features with very high confidence that it will not break any existing features.

3. Average development time will reduce greatly because we will know as soon as something is broken.

4. We will fire our ops team and make our dev team an dev-ops team. Our future plan is to adopt AI to write our softwares, and then we will fire our dev-ops team also.

Please

Everybody is doing it. We should do it too.
